

REWARD FAQ

HOW TO RUN REWARD 2.8 ON A NETWORK

Geocentrix software licences are held on Sentinel HL keys provided by Gemalto. These keys are USB dongles. Network keys are coloured red to distinguish them from local keys (purple).

How to configure your Licence Server:

1. Connect the supplied Sentinel HL key to a USB port on the server
2. Download and Install the Sentinel run-time environment (RTE), using the Windows GUI Run-time installer available here:

<https://sentinelcustomer.gemalto.com/sentineldownloads/?s=&c=End+User&p=Sentinel+HASP&o=Windows&t=all&l=all>

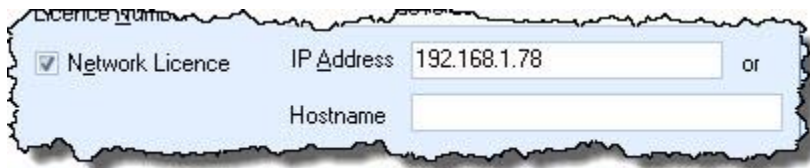

3. Obtain the IP address of your Licence Server, as follows:
 - a. In Windows' search box, type 'cmd' and press ENTER
 - b. In the Command Prompt window that appears, type ipconfig and press ENTER
 - c. Make a note of the IPv4 address (e.g. 192.168.1.78)

How to configure your Client Workstations:

1. If not previously installed, download and Install the Sentinel run-time environment (RTE), as described above (see "On your Licence Server")
2. Download and install the latest release of Repute, available here:

<http://www.geocentrix.co.uk/repute/update/index.html>

3. Run ReWaRD and, on the Licence menu, click Licence Registration
4. Click the Import... button and navigate to and select the licence (.LIC) file sent to you separately by Geocentrix
5. Tick the box Network Licence and enter the IP address (or Host name, if you know it) of your Licence Server

6. Click OK to save your modified licence
7. Check that ReWaRD's title bar says "Logged In"

For further help, please contact support@geocentrix.co.uk, quoting your company name and licence number.
