

REPUTE 3 FAQ

HOW TO OBTAIN USAGE DATA FOR A REPUTE 3 WAN LICENCE

To enable logging of Repute licence activity:

1. On the Repute 3 licence server, open a web browser and type `http://localhost:1947` in the address bar and press ENTER. Alternatively, if remote access is allowed, type `http://<server-name>:1947` in the address bar, and press ENTER.
2. The Sentinel Admin Control Centre should appear.
3. In the left-hand pane, click Configuration and select the Basic Settings tab.
4. Tick the options Write an Access Log File and Include Remote Requests.
5. Optionally enable Write Log Files Daily or set a size limit if you want log rotation.
6. Click the Submit button to save the changes.

To view logs of Repute 3 licence activity (at a later date):

1. On the Repute 3 licence server, open Windows File Explorer and navigate to `C:\Program Files (x86)\Common Files\Aladdin Shared\HASP\log`
2. Daily logs are saved with names such as `2026_06_30_access.log` and look like this:

```

```

3. To summarize these logs, copy the ones you want to process into a new folder and download the following Python script into that folder:

www.geocentrix.co.uk/support/downloads/parse_sentinel_logs.py

4. Open Windows' Command Prompt or Powershell and change folder using the `cd` command to the folder created in Step 3 above.
5. Run the script by typing `python parse_sentinel_logs.py` and pressing ENTER.
6. The script will create a CSV file (`sentinel_logs_summary.csv`) summarizing the usage data stored in the selected logs:

```
1 Name,Login count,Key ID,PIN,Product,Edition,Location
2 Andrew Bond,14,1235725383,49a7ac47,Repute,Enterprise,@acaster | @mitchell
3 Jenny Bond,7,1235725383,49a7ac47,ReWaRD,Professional,@mack
```

For further help, please contact Geocentrix Support quoting your company name and licence no.
